

Resource Manager

This document contains instructions for testing of Resource Manager.

STEPS –

1. Extract files from **Resource Manager v1.rar** . Go to Resource ManagerWebSite folder within it.
2. Modify *connection string* in **web.config** as per your database server. It is strictly advised to not to modify name of connection string.
3. Host website on IIS server with Asp.Net Framework v 4.0 set.
4. Test your website. Please note that only logged in users are allowed to create, modify and delete events.
5. Please note that the database attached had been modified especially table **C01RM0200**.
6. User is authenticated from table **Users** and user's *emp* value is placed in *BookedBy* column to track events created by user.
7. I had performed rigorous testing but there may be some faults. Please let me know them all.

Note - *I will rectify the source code as per it is possible until you are not satisfied with outcome.*
